Software Engineer with a Cybersecurity focus | Networking, IAM, traffic analysis and monitoring

OBJECTIVE

Seeking a position as a **Junior Information Security Analyst (SOC Tier 1)** or **IT Infrastructure & Security Analyst**, focused on monitoring, event triage and hardening of Windows and Linux environments.

SUMMARY OF QUALIFICATIONS

- **Bachelor's degree in Software Engineering** from the University of Canberra, Australia, with an emphasis in **Cybersecurity**.
- Hands-on experience in **IT infrastructure and information security**: technology park auditing, asset control, identity and access management (IAM), L2/L3 network segmentation and remote monitoring.
- Design and operation of a **corporate network in a lab environment** with Active Directory, VLANs and Cisco firewalls (ACL/NAT), combined with traffic analysis using **Wireshark**.
- Developed a **custom network reconnaissance tool in Python** with vulnerability correlation through the NVD/NIST API.
- **Fluent in English and Portuguese** — four years living and completing a degree in Australia.

CERTIFICATIONS

- **CompTIA Security+ (SY0-701)** — in progress, expected January 2027
- **SC-900: Security, Compliance & Identity Fundamentals** — Microsoft, 2025

EXPERIENCE

IT Infrastructure & Security Coordinator (Volunteer) | Brazilian Red Cross, Rio de Janeiro
Feb 2026 – Present

- Audited and diagnosed the technology park, implementing **asset control** and **secure data disposal protocols** (HDD sanitisation).
- Expanded and segmented the corporate network (L2/L3) and deployed remote monitoring and IP CCTV, defining **identity and access management (IAM) policies**.
- Designed and built the administrative management system for the CVB-RJ Training School applying **secure development practices**: password hashing with **argon2id**, **CSRF**, **rate limiting** protection, Zod input validation, role-based access control and automatic banning on suspicious activity.
- Aligned the data model and system flows with **LGPD** (Brazil's GDPR-equivalent data protection law). Live in production with **350 registered students** and steady growth since launch. Stack: Node.js, Express, PostgreSQL, Prisma. Repository

AI & Robotics Development Intern | Robot De Niro, University of Canberra
Jul 2024 – Nov 2024

- Built a generative-AI platform (GPT-4, Whisper, Eleven Labs) for a theatrical robot; optimised the real-time pipeline, cutting latency from **7.5s to 4.2s**. Presented at the Questacon Science Museum, Australia.

TECHNICAL PROJECTS

- **Secure Network Infrastructure** — Designed and deployed a secure corporate network with Windows Server, Linux, **Active Directory**, VLANs and Cisco firewalls (ACL/NAT), including technical documentation and control rationale. Report
- **NetScan** — Python reconnaissance tool for penetration testing: ARP host discovery, concurrent TCP scanning and **automatic CVE correlation** via the NVD/NIST API. Repository
- **Dash** — Full-stack financial dashboard with authentication and **Row Level Security** via Supabase, enforcing least privilege at the data layer. Repository

EDUCATION & DEVELOPMENT

- **Bachelor of Software Engineering** — University of Canberra, Australia. Completed December 2024. GPA 5.67/7.
- **Public Speaking & Communication** — Clube da Fala, 2025.

TECHNICAL SKILLS

- **Information Security:** IAM and identity governance, Active Directory, Windows and Linux hardening, asset management, secure data disposal, LGPD, risk management, secure development (OWASP)
- **Networking & Monitoring:** TCP/IP, traffic analysis with Wireshark, VLANs and L2/L3 segmentation, Cisco firewalls (ACL/NAT), network monitoring, scanning and asset enumeration
- **Offensive Security:** Network reconnaissance, CVE correlation (NVD/NIST), custom tooling in Python
- **Systems & Development:** Windows Server, Linux, VMs, Docker, Bash/PowerShell, Python, Node.js, Git/GitHub
