OBJECTIVE: To work as a **Junior Information Security Analyst** or **IT Analyst**, applying knowledge in Windows and Linux environment security, network traffic analysis, monitoring, and system protection.

SUMMARY OF QUALIFICATIONS

- Bachelor's degree in **Software Engineering** from the University of Canberra (Australia), with an emphasis in **Cybersecurity**.
- Hands-on experience coordinating **IT infrastructure and information security** at the Brazilian Red Cross, including asset management, IAM, and network monitoring.
- Full-stack development of **production web systems** with secure authentication, access control, payments, and LGPD compliance.
- Involvement in projects covering **generative AI, offensive cybersecurity (pentesting), and responsive web applications**.
- Agile team experience (**Scrum**), code versioning with **GitHub**, and delivery of scalable solutions.
- Effective communication in **English** and **Portuguese**, acquired during **4 years of residence in Australia**.

EXPERIENCE

IT Infrastructure & Security Coordinator | Feb 2026 – Present

Brazilian Red Cross — Rio de Janeiro

- Technical auditing and diagnostics of the technology park, optimizing inventory and asset lifecycle.
- Implemented secure data disposal protocols and control of storage assets (HDDs).
- Maintained critical connectivity and expanded the network (L2/L3) to new departments.
- Restructured remote monitoring and electronic security (IP CCTV), with a focus on **IAM**.
- Designed and built, from scratch, the **institutional website and administrative management system** for the Red Cross Training School (CVB-RJ), now in production with **169 registered students**.
 - o Stack: **Node.js, Express, PostgreSQL, Prisma, EJS**.
 - o Application security: password hashing with **argon2id**, **CSRF** protection, **rate limiting**, input validation with **Zod**, security headers with **helmet**, and **httpOnly** sessions persisted in Postgres.
 - o Features: student, enrollment, class, and course management, financial module, role-based access control (staff), and **student banning after suspicious activity**.
 - o Registration flow with email confirmation, password recovery, and LGPD consent.
 - o [View Repository](#)

AI & Robotics Development Intern | Jul 2024 – Nov 2024

Project: "A Series of Beta Tests" – Robot De Niro (University of Canberra)

- Developed and integrated systems using Python.
- Secure integration of third-party APIs (OpenAI GPT-4, Whisper, Eleven Labs), considering reliability and data flow.
- Reduced real-time communication pipeline latency from **7.5s to 4.2s** (perceived at 1.3s).
- Worked on software architecture, identifying critical points and potential failures.
- Project presented at the *Questacon Science Museum* (Australia).

ACADEMIC AND PERSONAL PROJECTS

NetScan — Pentest Reconnaissance Tool

- Python reconnaissance tool for penetration testing: ARP-based host discovery, concurrent TCP scanning (**ThreadPoolExecutor**), banner grabbing, and automatic CVE correlation via the NVD/NIST API.
- Generates reports in HTML, JSON, and CSV; automated testing with Pytest.
- [View Repository](#)

Dash — Financial Dashboard

- Full-stack personal finance app focused on security: authentication and **Row Level Security** via Supabase to isolate each user's data, with automated deployment on Netlify.
- [View Repository](#)

Secure Network Infrastructure Deployment (UC)

- Configured a secure corporate network with **Windows Server 2019, Linux Ubuntu, and Windows 10**.
- Implemented **Active Directory, DNS, DHCP, VLANs, and firewall** on a Cisco router (ACLs and NAT).
- Project focused on access control, network segmentation, and security; documented in a technical report.
- [View Project Report](#)

Interactive Portfolio with React and Animations (Personal)

- Responsive site with **React + Framer Motion**, deployed on GitHub Pages, with multilingual support (PT/EN) and light/dark mode.
- [Visit Site](#)

Church Website – INV Botafogo (Personal)

- Responsive institutional website built with **HTML, CSS, JavaScript, and Bootstrap**, with dynamic data integration via the GitHub API and continuous deployment through GitHub Actions.

EDUCATION

Bachelor of Software Engineering – completed December 2024

- University of Canberra (UC), ACT – Australia
- *Grade Point Average (GPA): 5.67/7 – equivalent to 8.1/10 (overall average across all courses)*

TECHNICAL SKILLS

Security & Networking

- Information Security · Network Traffic Analysis (Wireshark) · IAM · Active Directory · Firewalls (Cisco ACL/NAT) · VLANs · Authentication & hashing (argon2, CSRF) · Risk Management (Fundamentals)

Backend & Databases

- Node.js · Express · Python · Java · PostgreSQL · Prisma · Supabase · REST APIs

Frontend

- React · JavaScript · EJS · HTML5 · CSS3 · Bootstrap · ASP.NET

Tools & Methodologies

- Git/GitHub · Agile & Scrum · Docker · Vercel · Netlify · VS Code · Virtualization (Windows/Linux VMs)

ADDITIONAL INFORMATION

- **Microsoft Certified: Security, Compliance, and Identity (SC-900)** – Microsoft, Mar 2025
- **SAP BTP + S/4HANA in Practice** – Lab2Learn, Feb 2025
- **Introduction to Mobile Development** – Meta, Feb 2023
- **Public Speaking & Communication Certification** – Clube da Fala, Nov 2025
